Question

Please look at the nine set theory axioms and examine them personally. That is, express what is difficult about understanding them; what is easy about understanding them; how they describe sets. Dive into the axioms with as much detail as you have interest.

Assignment

the turn-in work for this assignment is a paper. If you want a format I'd say AMS or IEEE but the format does not matter much to me. The paper has no minimum or maximum, simply write a paper you could be proud of. Please turn in a pdf file to the canvas.

Tips

recall the point of this kind of problem is not necessarily a *correct* answer, rather an exploration. It will benefit you to find something about this that interests you and focus in on that.
